Mccabe's cyclomatic complexity

The complexity score: 6

Explanation: We have 5 decision points as follows:

```
1- if (maxPos >= 0)
```

```
2- if ((array[minPos] > searchMe) || (array[maxPos] < searchMe))
```

```
3- while (maxPos >= minPos)
```

```
4- if (array[middle] == searchMe)
```

```
5- else if (array[middle] > searchMe)
```

```
Rule is V(G) = P + 1 = 5 + 1 = 6
```
